

Design Dynamics all new, complete line of wood and gas burning fireplaces is just what you might expect from the most innovative company in the hearth industry. Or maybe a little more. The new line of patent pending Mosaic Masonry™ products includes a full line of indoor and outdoor; vented and vent free, wood and gas burning fireplaces in a variety of sizes and looks. Not only are we presenting the most beautiful line of fireplaces available, but we're doing it in a novel way specifically geared to the specialty hearth dealer. Each fireplace consists of a chassis and a separate, common masonry kit that installs separately in a variety of different chassis'. In the case of gas fireplaces, there is also a unitized burner and log module, similar to our gas log systems, that inserts into the floor of the fireplace. The beauty of this system is that it enables the dealer to offer as many as 4 different models while stocking only 1 chassis, freeing up working capital as well as valuable warehouse space. Standard features throughout the line include full insulation, solid full length nailing flanges with drywall stops, and tough powder coated finish.

All woodburning fireplaces utilize 12" chimney
 Vented gas fireplaces utilize 8" chimney

THE CENTURION

At the top of the line is the Centurion. It's tall, clean faced, slant back design just might make it the perfect manufactured woodburning fireplace. It's 48" wide and an astounding 42" tall, but perhaps even more impressive, it's the only UL 127 fireplace with a flush hearth floor that's only 1 ½ inches above the ground! The Centurion offers Mosaic Masonry™ firebrick in Warm Red and Ivory color selections in a custom herringbone pattern. Other generous standard features include hand-forged log grate with signature andirons and chain-mesh masonry spark screens.
